

RKW's RoofTopGuard WINS PRAISE III

“RoofTopGuard – it’s a great idea and a great product.”

Drew Kellar
Plant Manager, Indaco Metals

Indaco Plant manager Drew Kellar visited RKW at a recent trade show specifically for new roofing underlayment technologies to share with his customers and employees. According to Drew, RoofTopGuard II™ high-performance roofing underlayment with superior strength five-layer construction was an “easy decision.”

“Traditional felt underlayment technology is just too expensive and labor intensive,” said Drew. “We can apply felt underlayment in the morning and the next day we have to do it all over again, because wind and moisture damage can cause the underlayment to wrinkle up overnight. If the felt isn’t completely flat, especially on overlapping seams, a standing seam metal roof will show every wrinkle – and in hot weather, it’s slippery and tears when you walk on it.”

According to Drew, Indaco installs about 100 roofs per year. RKW’s booth was on his list for underlayment samples and information. “We knew exactly what we were looking for and where we wanted to spend our time,” said Kellar. “For me, it’s an easy decision to use RoofTopGuard over traditional felt, especially in Oklahoma where we have severe weather, heavy winds and hail. With RoofTopGuard, you can walk on it, and it has a grip surface. I think it’s a great idea and a great product. It’s an easy decision.”

Visit RKW US, Booth #502 at the International Roofing Exposition – Feb. 16-18, 2011 for new technologies.
